

CROWN RENEWABLE POWER

BATTERY
SINCE 1926

On Demand

RENEWABLE ENERGY STORAGE SOLUTIONS

**CLEAN
RENEWABLE
ENERGY**

WHEN YOU RELY ON
RENEWABLE ENERGY
THERE IS **NO**
ALTERNATIVE TO...

**PROVEN
POWER STORAGE.**

That's why savvy businesses, homeowners and those who count on wind, photovoltaic or solar power systems to run their facilities, houses — and lifestyles — turn to Crown for renewable power storage products. We've been at the forefront of renewable energy storage innovation for many years, offering an array of batteries to meet the varying requirements of today's RE system owners while continually developing and testing new products with an eye on tomorrow's needs.

**STORE.
DELIVER.
REPEAT.**
You bet.

While we employ the most advanced equipment and technologies, highly efficient processes and dedicated team of experts, our array of high-performance energy storage solutions were also developed the old-fashioned way — **by listening to the customer.** We carefully evaluated market needs, staying acutely aware of findings and voice-of-customer feedback during the design phase — unlike some competitors that simply repackage existing batteries into an array and label it an RE line.

The result? A wind and solar power storage array that's second-to-none, keeping things light and energized when the sun sets and moving along when the breeze dies down.

- ▶ The most comprehensive, dedicated line of RE batteries vs. other manufacturers
- ▶ Battery capacity ratings ranging from 80 to 2550 ampere-hours (20 Hour Rate)
- ▶ Exclusive C-Force™ Active Mass, heavy-duty plates and construction add up to superior performance and longevity
- ▶ Recognized by serious experts and users as "Best Available" and "Most Reliable"

Common Design Features of Monobloc & Power Module Series:

Rugged Cell Construction Signature heavy-duty cast-on strap and terminal post structures manufactured in a highly automated production process deliver unmatched electrical efficiency and durability.

Low-Maintenance Reliability Crown Renewable Products' low maintenance design ensures reduced Preventative Maintenance frequency, lower PM service costs, and best-available user ROI:

- Proprietary cell construction that reduces water loss during the charge cycle.
- Additional fluid headspace above the battery plates so batteries can perform longer between watering intervals.
- Water-Saver™ battery cover and high-performance vent components capture gasses emitted during the charge cycle — and return restored fluid to the battery.

Safe & Easy Handling CRP Power Module and Monobloc batteries include fixed handles or lifting lugs to enable safe and easy handling as well as the flexibility to be installed with — or without — battery racks.

MONOBLOC SERIES:

PROeye™

Clean and easy, our quick-look electrolyte level inspection system lets you know when it's time to add water.

Rigid Connectors

Heavy-duty TTP, COS and Post connectors deliver maximum electrical efficiency and durability.

Advanced Engineering

Intelligent, yet robust construction features industry-firsts such as our C-Force™ Active Mass and SolidCast™ plates which combine to accept charge more effectively, maintain it longer, and deliver on-demand power for your gear like nobody's business.

PosiWrap™ Separators

Crown's proprietary PosiWrap Separators give you less to worry about and more to like by delivering improved charge acceptance, protection from short-circuiting and an even higher level of durability.

SolidCast™ Plates

Our massive SolidCast Plates boast an advanced grid architecture and ultra-thick wires, with plates now holding more C-Force Active Mass than ever — leading to highly efficient charging, longer discharge times and battery life, and extreme overall performance.

POWER MODULE SERIES:

Fortified Steel Module Design

The Power Module's design couples a powerful range of available capacities with unmatched application flexibility, while the battery's steel tray increases compression of the battery's internal plate group to increase cycle life while providing a better solution for temperature management and electrical isolation.

Element Protector

Full-width element protector with individual fingers between each plate lug prevents premature failure from missing short-circuit and prevents separator damage during cell inspection.

PosiWrap™ Plate Protection

- A** Vertical Double Mat Slyver Wrap becomes embedded into the plate surface to ensure complete active material retention for longevity.
- B** Horizontal Glass Mat Wrap provides a secondary layer of active material retention.
- C** The Koroseal Retainer Wrap is a perforated envelope which tightly binds the two glass mat wraps to the plate while providing a third layer of insulation against missing and short-circuits.
- D** The Sleeve Separator is a high-porosity sleeved separator that delivers a final layer of insulation from direct plate-to-plate contact and missing.

Battery Cover

Heat-sealed to ensure a permanent, leak-free seal between the cell container and cover. The cover's double O-ring bushing design allows for positive plate growth without cover leakage and eliminates cell cover distortion.

2CRP2550

Z³ Plate Construction

Power Module batteries Z³ plate design combines three integrated features for superior electrical performance and longevity.

- 13 vertical plate wires that withstand the rigors of deep cycling service and high-rate discharge.
- Offset internal wires are designed for less internal resistance and maximum active material retention to deliver premium battery life.
- C-Force Active Mass, manufactured with premium lead-oxide from our own oxide mills to exact specifications, applied uniformly and temperature-cured in computer-controlled Curing Ovens that assure optimal product performance and life.

FreedomBloc *by Crown Battery*

**ENVIRONMENTALLY RESPONSIBLE?
RUGGED INDIVIDUALISM?
BUDGET-CONSCIOUS?**

OR ALL OF THE ABOVE...

We've got you covered. Whether you're looking for a low- or no-maintenance off-grid renewable power storage battery or system, Crown has the package solution you need. Take our FreedomBloc Energy Storage Systems. Safe, affordable and readily deployable, this tough array provides energy independence and peace of mind to first-world off-gridders as well as developing communities worldwide, or even as a grid-connected UPS.

- ▶ Storage capacities ranging from 10 to 20 kWh; best available application performance and ROI
- ▶ 24- and 48-volt low-maintenance deep-cycle FLA and maintenance-free AGM solutions available
- ▶ High-density polyethylene enclosure protects against extreme temperatures and elements
- ▶ Earth-friendly bloc is reusable at the end of battery life; batteries are fully recyclable

Advanced American Engineering.
Globally Proven Performance.

The leading-edge sealed technology behind CROWN1® deep-cycle AGM batteries makes them ideal for renewable energy systems, resulting in the delivery of more power, longer life and performance with less maintenance. Crown combined the newest technology, best-practice manufacturing processes and tough, tested and proven designs, leading to a collection of AGM products that deliver the storage capacity and power RE system owners depend on the world over.

- ▶ Super-thick SolidCast™ plate construction, more Active Material and premium Glass Mat Separator join to deliver superior performance, longevity and protection against short circuiting
- ▶ Spill-proof, sealed and maintenance-free
- ▶ Ultra clean and no gassing; the safest and most sustainable energy storage option
- ▶ Available in a variety of 2, 6 and 12-volt product capacities

REFINED.
RECYCLABLE.

REMARKABLE.

As a leading innovator and manufacturer of lead-acid batteries, Crown is proudly committed to sustainability and environmental stewardship, helping to conserve resources, reduce our carbon footprint – and yours! – and provide power storage solutions for renewable and traditional energy sources while keeping our planet safe and clean for generations to come.

- ▶ Lead batteries are recycled at a rate of **99%** of shipments annually in North America
- ▶ For over **150 years**, lead batteries have been noted as the safest and most reliable power storage solution
- ▶ **99%** of lead battery materials are recycled and reused, compared to less than 15% of alternative storage technologies
